STAGE I BOOM!™ AUDIO SYSTEMS

Boom! Audio Stage I systems take your sound to the next level. When compared to the factory-installed Original Equipment audio system, Boom! Audio Stage I speakers feature larger woofers for deeper bass and soft-dome tweeters for better balanced sound quality. Efficient Stage I speakers can be easily powered with the built-in amplifier in the factory-installed Boom Box Infotainment System, or with the addition of Boom! Audio amplifiers, the larger speakers can produce more volume at all frequencies. A custom EQ was developed for each configuration of speakers to get the most out of the Stage I system.

A. BOOM! AUDIO AMPLIFIER

A. BOOM! AUDIO AMPLIFIER KIT

Take your music to the streets. Boom! Audio Amplifier Kits allow you to crank up the volume without distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction and reduced clipping. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine grade, Class D, 4-channel, 75-watt RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. Fairing Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio's internal amplifier.

STAGE II BOOM!™ AUDIO SYSTEMS

Boom! Audio Stage II systems give you the very best motorcycle sound experience. Stage II systems are based on a bi-amplified, three-way speaker design. Each Stage II speaker features a separate woofer, midrange and tweeter element that allow frequencies to be delivered with the optimum driver design. Each speaker is powered by two channels from the amplifier — one for the woofer, and the second for the midrange/tweeter combination — for a total output of 150 watts/speaker. This doubling of the power allows you to play your music louder with far less distortion than traditional systems.

Boom!™ Audio – Stage II

BOOM! AUDIO STAGE II COMPONENTS*

Headline your own concert tour. Big and bold is the best way to describe the musical performance you will experience when listening to your favorite band through a Boom! Audio Stage II sound system. The weather-proof bi-amplified, three-way, 150-watt per channel speakers feature high-excursion woofers and separate mid- and high-frequency drivers. An industry-leading driver design utilizing premium materials to deliver increased accuracy, durability, and responsiveness. Powered by a dedicated 300-watt RMS amplifier, each pair of speakers is capable of producing “filling-rattling” volume. Designed to work seamlessly with the factory installed Boom! Audio infotainment head unit, the Boom! Stage II components are system matched and feature custom-tuned static and dynamic equalization that dial in the ideal setup for your ride. And you can choose how far you want to go. From a single pair of fairing-mounted speakers and a 300-watt amp to a full bore 8-speaker, 4-amp, 1200-watt system, we’ve got you covered.

A. BOOM! AUDIO AMPLIFIER KIT

Take your music to the streets. Boom! Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction and reduced clipping. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio’s internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine-grade, Class D, 4-channel, 75-watts RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. Fairing-Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio’s internal amplifier.

A. BOOM! AUDIO AMPLIFIER KITS

Take your music to the streets. Boom! Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. When teamed with Boom! Audio Speakers, the Boom! Amplifier provides 50% louder (6dB) system output than other popular aftermarket systems at the same volume setting. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The amplifier features 40-watt/channel (160-watt total) output. Kit includes all mounting hardware.

A. WIRELESS HEADSET INTERFACE MODULE

It's time to cut the cord with your bike. Now available for '14-later Touring and Trike models equipped with Boom!™ Audio 6.5GT and GTS Radios, this Wireless Headset Interface Module (WHIM) lets you communicate with your bike without being wired to it. The WHIM Bluetooth® adapter permits wireless connectivity to the 6.5GT infotainment system, allowing you to communicate via CB radio, hear turn-by-turn GPS directions, listen to your favorite radio stations and so much more all through your Bluetooth-enabled headset.

Bluetooth Wireless Technology

Wireless interface permits full access to the Infotainment features without the hassle of being connected to the bike. You have full freedom of movement for turning your head and getting off the bike at fuel stops.

Integrated Into the 6.5GT and GTS Radio

Seamlessly use all wired headset functionality (CB, Phone, Intercom, Navigation, Radio) without the compromises of aftermarket systems, and configure your Boom! Audio 20S headset directly from the radio controls.

Superior Audio Quality

Harley-Davidson® headsets feature proprietary software that delivers superior audio quality with stereo output compared to non-Harley® headsets, which provide a mono sound output.

Dual Headset Connectivity

Two Bluetooth-enabled headsets can be connected to one WHIM, simplifying installation and keeping costs in line.

Integrated Behind the Fairing

Module mounts behind the fairing and connects directly to the radio, eliminating external wires and connections to console and Tour-Pak™ communication ports.

Compatible with H-D® Wireless Headsets

Current H-D wireless headsets are completely compatible. No need to purchase new headsets to use the WHIM system. Harley headset volume can be adjusted from the motorcycle hand controls.

Impact of Retrofit on Wired Microphone Functionality

Upon installation of the WHIM, your motorcycle's wired microphone functionality will no longer be available. However, wired audio will continue to function as before.
